Art Unit: 1794

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Wilhoit in view of Millis et al as set forth in paragraph no. 6, Paper No. 20071115.

3. Applicant's arguments filed March 11, 2008 have been fully considered but they are not persuasive. Applicant's contention that hop beta acids cannot be substituted for the bacteriocins in Wilhoit is without merit since equivalence is not a requirement for substituting one component for another. It is more than sufficient if each of these components serves the same purpose, as occurs in each of the applied references. Despite obvious differences between the two components, Millis et al (Abstract) makes it abundantly clear that hop beta acids will protect processed meat products, including hot dogs and sausages (col. 3, lines 28-29), against Listeria contamination. With this in mind, it would have been obvious to the skilled artisan to substitute one well known Listeria inhibitor (hop beta acids) for another well known Listeria inhibitor. Once the processed meat is directly treated with the hop beta acids, as occurs in Millis et al, the meat is then used in preparing hot dogs or sausages (col. 3, lines 28-29). When the processed meat is conventionally encased in a cellulosic casing, as often occurs in making these hot dog and sausage products, some of the hop beta acid material will naturally transfer to the inside of the casing during contact with the encased meat.

Thus, applicant's invention is thereby rendered obvious by the combination of Wilhoit and Millis et al.

4. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
